To-night will mark the closing of an excellent program of vaudeville at the Pavilion. Both acts are decidedly good and have pleased the patrons of this ever popular little theatre. The three Italian troubadours have been the big hit of the bill. This is not saying that the Gafferts are inferior performers. They are, indeed, very clever in their line and receive numerous hearty rounds of applause throughout their act, but the beautiful voices and musical numbers of the troubadours appeal to one stronger than the acrobatic feats of the Gafferts. The management of the Pavilion has never had a better singing act. The voices blend beautifully. Added to this is a mandolin and guitar accompaniment, making harmony that is beyond description.

At \$15.00 we have got a number of different models in suits that are extra values, made from fine all wool serges, in all colors and black. These suits are made in the plain tailored styles finished with braid, and satin bands. If you want a good fifteen dollar suit see these.

Ladies' Tailored Suits

If a lady wants a dressy spring garment, the tailored suit will appeal to her as the garment needed. The suit is a dressy spring garment especially when the coats are the length worn this season.

At \$20.00 and \$22.50 are some values in tailored suits that are very good models. These suits are made mostly in serges and are a suit that will wear to look well and will keep their shape.

At \$25.00 and \$27.00 is a line of suit values that will surely appeal to those who want something a little different. Here is a line of suits made up of worsteds and serges, in a variety of the season's best models. These values we carry mostly in samples, thus giving you suits that are the best of values, and then you do not see many duplicates of the same model.

At \$30.00 are some suit values that are sure to appeal to you as a little different, as there is a tone about these values that makes them as different in style and finish. These are suits we only have one or two alike. Just look over their values.

TALK OF THE TOWN.

ORIGIN OF LLOYD'S.

Humble Beginning of Europe's Great Maritime Agency.

Two centuries ago a man who had a cargo to send to the Mediterranean contrived to get rid of some of the risk by inducing a friend to take an interest with him. It was necessary to write out a statement of contract to which the guarantors subscribed. This was the first underwriting.

These two men happened to be frequenters of Lloyd's coffee house in London, which was a favorite place for the merchants of the town to gather to discuss business or to gossip.

Others immediately saw the advantage of the scheme which their colleagues had devised, and on the next voyage the risk was parceled out among a larger number of the patrons of the coffee house.

Out of this small beginning has grown the great European maritime agency, still bearing the name of the humble coffee house proprietor, and which not only writes risks on vessels, but rates them and publishes their arrivals at every port the world over, no matter how small or how remote, situated.—"Annals of the American Academy."

Where Abraham Fished.

Mrs. Victoria de Bunsen in "The Soul of a Turk" relates a legend concerning Abraham which will be new to many readers. She learned of it while at Edessa, the traditional Ur of the Chaldees. She was shown there a large oblong tank of water so filled with fishes resting just below the surface of the water that their fins and backs seemed almost wedged together so as to form "an almost solid layer of silvery life."

"The guardian of the mosque throws some meal into the water, and the fish jump high to catch it, a great living pyramid of which those who jump the highest form the pinnacle. The tradition is that Abraham as a child fished in the tank; hence the fish were considered sacred. No single one has been caught or killed to this day. Indeed, death would overtake the man who transgressed this law."

Protection From Lightning. The Sir Oliver Lodge stated that the problem of securing protection from lightning consisted in finding the best method of dissipating the enormous energy of the flash, but that it was not wise to get rid of the energy too quickly. A thin iron wire is considered the best lightning conductor from the electrical point of view, but it is almost impossible to protect a building from lightning unless it is completely enveloped in a metal cage. It is by no means true that a building is safe when provided with a conductor reaching up to the highest part of the building.
